Gmail Integration Flow

Workflow overview generated from the uploaded n8n workflow JSON.

Workflow Sequence

1. When clicking ‘Execute workflow’

Node type: manualTrigger

Starts the workflow when you manually click Execute workflow.

2. Customer Mock Data

Node type: set

Defines sample customer data:

• **customerName**: Alice Smith

• **customerEmail**: pragati96patra@gmail.com

3. Send a message

Node type: gmail

Sends a plain-text email using the configured Gmail OAuth2 credential.

To: ={{ $json.customerEmail }}

Subject: =Welcome to n8n Course, {{ $json.customerEmail }}

Message: =Hii {{ $json.customerEmail }}

Connection Order

Manual Trigger → Customer Mock Data → Send a message (Gmail)

How to Test

1. Open the workflow in n8n.
2. Confirm the Gmail OAuth2 credential is connected and authorized.
3. Review the recipient, subject, and message fields in the Gmail node.
4. Click Execute workflow to run the workflow.
5. Check the recipient inbox and Sent folder to verify the result.

Note: The uploaded workflow contains sample customer details. Review the recipient and email content before executing it.
